To Manager Nelian

I have been using Dianel Pro 22 s ion for the past 7 years. Purchased from Alians  
I use it every day in my natural therapies clinic to analyse and treat people with all types  
of conditions. It is quite accurate with digestive issues.

I dont find it very accurate with thyroid issues. Doesnt pick up medically diagnosed con  
of hypothyroidism and doesnt seem to be as successful treating these issues

request- can you create a screenshot of the rear of the thyroid?

Also there are no muscular screenshots. I treat a lot of athletes with soft tissue injuries &  
dont have the screenshots to test or treat them.

does the program test for pregnancy? I couldnt see anything specifically

Is there a way we can scan for the screenshots previously selected instead of  
manually having to input again?

The program doesnt appear to show broken bones????

Will there be any presets for body systems for automatic scanning?

eg digestive system or urinary system instead of manually inputting

regards,

Tracey Banes
